Hi, Iyiola,
This is our Marvell AC5 based L2+ switch featuring
1. 24 Port PoE af/at for multiple PDs
2. 10G Fiber Uplinks help smooth traffic transport
3. Support OEM and customizable Web GUI
Price: 180USD/PC
Do you need some samples for testing?
Thank you.

Hi Simon,

Thanks for the mail.
Are you able to share your product catalog with me?
Do you have distributors in the UK?
Can we work as your distributor in the UK?

Regards

Iyiola

Hi, Iyiola,
Thanks for your reply.
1. Please see attached download links to know more information.
And we will update it for Q4 soon.

2. For now, we do not have a distributor in the UK.
We are certainly open to discussing a distributorship after we get to know each other and see good cooperation.

3. I see from the MikroTik consultant list that you are a certified consultant.
This is great, MikroTik adopts Marvell Prestera series for L2 / L3 switches.
We are also focusing on Marvell AC5 solutions which can be a competitive alternative in some projects.
Of course there will be some feature differences.
As an engineer, maybe you can get some samples to test and compare?
With a better understanding of our product features, this helps a lot in future discussion like branding or project discussion or even stocking.

4. One question for now: do you keep stock for reselling in the UK, or do you mainly work project by project?

Thank you.

Hello Simon,

Thanks for your response.
For now, I just work project by project.
My plan is to start a reseller partner agreement. My company is new here and I am happy to help you establish your brand here.
I have been working with mikrotik for over 20 years and I know a lot about networking and project delivery.

I will be opened to ordering some samples.
Will the samples be at a cost to me or are you happy to shop to me so I can run my tests and we start discussing from here.

Regards

Iyiola

Hi, Iyiola,
Thank you for sharing more about your business.
It's great to learn more about your background and your plans for the UK market.

1 Regarding evaluation samples, we're happy to support your testing.
Normally evaluation units are provided at a partner price, and the sample cost will be credited toward your first commercial order.
For long-term partners we can discuss additional support based on the project and cooperation plan.

2 Considering your background and the projects you worked on, I believe the STC-424XGGPM-280W(180USD/PC) would be a good starting point.
In last email, I shared our L2+ feature list which is our focus now.
2.1 you can fully understand the features, UI and OS.
2.2 in recent days, PCB and material costs are rising.
This is one of the very competitive models.
2.3 this model supports 10G fiber uplinks and 24 Port PoE, it is ideal in many projects(enterprise, ISP, hospitality, CCTV)

So for testing, for promotion or for even internal use etc., this model is a good choice.

3 I'd really appreciate your technical feedback after testing.
As someone with extensive MikroTik experience, your suggestions would be valuable for our future product development as well.
About your reply: to help you establish your brand here.
That's exactly our long-term goal. We're not simply looking for sales.
We hope to build a trusted local presence together with experienced partners.
Let's take this step by step and explore how we can grow together!

Please let me know your delivery address, and I'll prepare the evaluation quotation accordingly.
Thank you.
